RMJM Appointed as Interior Designer for New Terminal B at Sheremetyevo Airport

RMJM has been appointed by TPS Nedvizhimost to design the interior of the new Terminal B in the Northern Terminal Complex of Sheremetyevo Airport in Russia. The airport, located just north of Moscow, is the busiest in the country, handling more passengers and cargo than any other.

The Northern Terminal Complex is currently occupied by the 2007 Terminal and the now dismantled Terminal B, built in 1964. With an extension totalling 114,000 m², the new Terminal B will officially open in 2018.

The concept for the public areas of this large-scale project, covering over 55,850 m², was designed by [RMJM Serbia](#) and developed in collaboration with [RMJM Italy](#)'s interior design team. The new interior for Terminal B will cover three levels within the airport and includes the public hall, baggage claim, departure hall, pier and shopping arcade.

The two RMJM teams sought to convey the tradition, strength and progressiveness that characterize modern day Russia. Fittingly, RMJM drew inspiration from Russian Constructivism, a seminal art movement in the early 20th century. The space, form and palette of Terminal B is based on renowned artists from this period such as Vladimir Tatlin, Nahum Gabosa, Alexander Vesnina, Alexander Rodchenko, El Lissitzky and Liubov Popova. Art is integrated with cutting edge technology throughout Terminal B to shape the space around the movement of passengers, while the principles of Russian Constructivism are also reflected in the geometry of the floors, walls and ceilings.

Goran Nikolic, RMJM Serbia CEO and Lead Project Architect, said of the project: "An airport is a place of meeting, movements, exchanges of informations and an open door to the world. We wanted the new Terminal B to be the door through which Russia can tell its story to the world. The concept was to awaken a sense of national pride as for Russian citizens passing through the terminal. Foreign visitors, meanwhile, will be made aware that the ideas created in Russia are as big as the Russian land."

"The concept for the interior of Sheremetyevo airport's Terminal B represents the universality and timeless character of Art as well as its powerful communicative function. To reinforce this idea, we have integrated high tech

features in the Constructivist artworks”, added Jelena Kristovic Nikolic, RMJM Serbia’s Lead Architect.

The new Terminal B in Sheremetyevo Airport will be completed in time for the 2018 FIFA World Cup and will welcome the world to Russia for this historic event.

Notes to the Editors

About RMJM

Founded by Sir Robert Matthew and Stirrat Johnson-Marshall in 1956, [RMJM](#) Group is one of the largest, most geographically and culturally diverse architecture firms in the world. With studios across five continents, the RMJM family can share knowledge, expertise and design talent, enabling them to think quicker and act faster. Working stronger together, they are global enough to make a difference while still being local enough to be personal. Through their shared vision of success, RMJM has spent more than 60 years creating a legacy of world-class design.
